Printed in Japan.

Light Base is a light source that illuminates whatever you place on top of it. Just push the switch and place an item you may have found on a trip, or one of your favorite materials, on it.

As an accent to moderate the night, you can enjoy it on tables, in entrance halls, hallways, bedrooms, and so on.

Since the light source does not generate heat, it is safe even with materials that are sensitive to heat.

Blasted acrylic cube

Cylinder of rolled up Japanese paper

Because Light Base has a built-in timer that turns off automatically 8 hours after turning on the switch, it is safe even if you forget to turn it off.

It can be charged simply by connecting with a cable from a USB compatible device such as a personal computer.

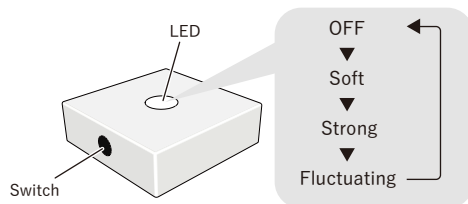

A single charge can be used for about 150 hours with soft lighting, about 40 hours with strong lighting, and about 70 hours with fluctuating lighting.

How to use

Please remove the transparent sheet on the back of Light Base before using.

The battery is almost charged. So you can use it as is.

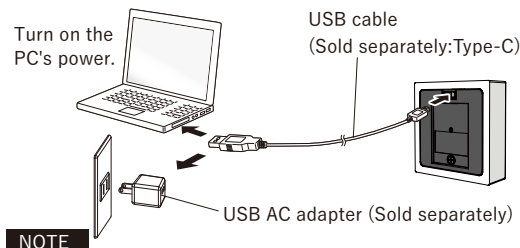

Every time you press the black switch on the side of the main unit, it switches the mode as shown below. With "Fluctuating" lighting, you can enjoy it flickering like a candle.

Charging

If the light turns off within 8 hours after pressing the switch, please charge it.

Charging starts when you connect a USB compatible device to the USB port on the back of the Light Base with a USB cable (Type-C: Sold separately).

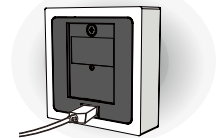

NOTE

- If the battery level is sufficient, charging will not occur. (In this case the LED will flash twice.)
- Pushing the USB connector too hard can damage it.

During charging, the LED slowly flickers at intervals of about 2 sec and turns off when charging is completed.

If the battery is completely depleted, charging will be completed in 4 to 6 hours.

4 to 6 hours

If you remove the USB cable, Light Base comes to be usable.

NOTE

- Unable to operate under power feeding from USB cable.
- Do not charge except the built-in batteries.

About batteries

You can charge the built-in batteries 1,000 times. If you charge 4 times a month, the life is 20 years or more in theory therefore you do not need to replace them often.

It is possible to open the cover of the back and replace the built-in batteries with regular AA batteries. In that case, please note the following cautions.

CAUTIONS

- Do not charge except built-in batteries.
- There is no guarantee of the specified time until the batteries run out.
- Remove used batteries.

⚠ Precautions

- It is not waterproof, so please do not put wet items on it.
- Do not use or store in wet or damp locations or outdoors.
- When connecting the USB cable, push in too hard and the USB connector may break. Please be careful.
- Do not remodel or decompose this product.
- If you do not use the product for a long time, remove the batteries and store it.
- Batteries should be replaced only in the event of a disaster or other emergency.
- Do not look directly at a lit LED for a long period of time. It may damage your eyes.
- Do not charge batteries other than the built-in battery.
